

BUSINESS CENTRAL FOR DISTRIBUTION

Streamline Fulfilment & Supply Chain Operations With Microsoft's Cloud-based ERP Solution & Akita

Microsoft Dynamics 365 Business Central delivers a fully integrated distribution ERP solution, giving businesses complete visibility and control across inventory, supply chain, logistics, and fulfilment – all from a single platform.

As an expert Business Central partner, configures and deploys the solution to meet the specific demands of distribution operations across the UK.

Key Features For Distribution

Demand Forecasting & Inventory Optimisation

Use historical data and predictive insights to forecast demand, automate replenishment, and maintain optimal stock levels with dynamic safety stock and reorder points.

Automated Replenishment & Supply Planning

Generate purchase and transfer suggestions based on real-time inventory, sales trends, and lead times to ensure consistent availability across locations.

Logistics, Shipping & Route Optimisation

Integrate with carriers to automate shipping and optimise delivery routes, reducing costs and improving delivery performance.

Freight Cost Management

Calculate and allocate freight costs using key variables such as weight, volume, distance, and carrier rates to support accurate pricing and margin control.

Returns & Aftersales Management

Manage end-to-end returns with RMA processing, tracking, disposition, and automated refunds or replacements to maintain service quality.

Why Choose Business Central For Distribution?

- Real-time visibility across inventory, orders, warehousing, and supply chain operations
- Automated processes that improve fulfilment speed, accuracy, and operational efficiency
- Integrated finance, purchasing, and reporting within a single business platform
- Scalable cloud solution that supports growth, multi-site operations, and remote access
- Seamless integration with Microsoft 365, Power BI, and wider business systems

Warehouse Management With Business Central

Business Central provides a smart warehousing solution that improves stock management and working efficiency. By mapping your warehouse layout and rack dimensions, Business Central supports flexible storage that prioritises the nearest available bin spaces – combined with barcoding and accurate stock tracking.

Automated Data Capture

Mobile scanning updates inventory in real time, improving accuracy across all warehouse locations.

Multi-Location Management

Manage multiple warehouse locations within a single system with full visibility.

Serial Number & Batch Tracking

Ensures full traceability across warehouses and locations.

Cycle Counting

Maintain accurate stock levels through continuous counting without disrupting operations.

eCommerce Integration

Synchronise stock levels automatically with online sales channels.

Electronic Data Interchange (EDI)

Automate transactions with suppliers and logistics partners.

Partnering With Akita

Akita delivers Business Central warehousing and distribution solutions engineered around real operational demand.

Our approach starts with rigorous consultancy – we analyse your warehouse workflows, data flows, and commercial pressures to ensure Business Central is configured to deliver measurable gains in productivity, stock accuracy, and fulfilment performance.

Deployment is planned with operational continuity as a priority, integrating seamlessly with finance and wider business systems already in use.
